
Action 15: Use of land parcel identification

What is the content?

Member States should study the possibility of using land parcel identification established for the Common Agricultural Policy (CAP) management for the location and monitoring of the land under organic farming.

What has been done? What was achieved?

The relevant Commission and Member states services have considered on the basis of a preliminary analysis that this approach is not particularly well suited to monitoring organic farming.

What is planned? What is on the way?

The issue will nevertheless be revisited and discussed again.
